PROFESSIONAL SUMMARY

Detail-oriented Computer Science graduate with Cum Laude honors and a strong interest in data analytics. Experienced with SQL and Python to clean, explore, and analyze datasets; identify patterns; and communicate findings through academic and portfolio projects. Applied analytical and model-evaluation techniques in a deepfake video detection thesis and developed SQL-based retail sales and Python-based customer churn analyses. Seeking an entry-level Data Analyst role to turn data into actionable insights and support evidence-based decisions.

EDUCATION

Biliran Province State University (BiPSU) – Main Campus *Naval, Biliran*
Bachelor of Science in Computer Science | ***Cum Laude*** *May 27, 2026*

Lucsoon National High School (LNHS) *Lucsoon, Naval*
Technical-Vocational-Livelihood in Information and Communications Technology (TVL-ICT) | ***With Honor*** *June 30, 2022*

EXPERIENCE

Management Information System (MIS) – BiPSU *Naval, Biliran*
MIS Intern *Jan. 23 - April 30, 2026*

- Provided first-line technical support by troubleshooting computer issues, installing software, and assisting with preventive maintenance to support day-to-day university operations.
- Assisted offices with data analysis and information-processing tasks to support administrative activities and reporting needs.
- Enhanced the school information system by helping implement a QR-code-based evaluation system that directed users to the appropriate online form based on the evaluation type.
- Supported digital evaluation submissions by connecting form responses with the school's database, helping reduce reliance on hard-copy evaluation forms.
- Encoded and organized institutional information in the school's database to support digital archiving and information retrieval.

Department of Information and Communications Technology (DICT) *Naval, Biliran*
Philippine Startup Challenge - *Regional Qualifier* *October 16, 2024*

- Collaborated with a team to develop and pitch a technology-based startup concept addressing a real-world problem.
- Applied ideation, problem-solving, teamwork, and presentation skills while refining the concept using feedback from mentors and judges.

PROJECTS

Development of a Deepfake Video Detection System Based on Comparative Evaluation of Convolutional and Recurrent Neural Network Algorithms – *Thesis Project | Project Leader, Data Analyst, and Programmer*
Flask, Python, TensorFlow, Convolutional Neural Network (CNN) and Recurrent Neural Network (RNN) models

- Led a team of researchers in planning, developing, and completing a deepfake video detection thesis, coordinating tasks and timelines from proposal to final defense.

- Collected and prepared authentic and deepfake video datasets with spatial and temporal characteristics, enabling model training for deepfake detection.
- Built and trained Convolutional Neural Network (CNN) and Recurrent Neural Network (RNN) models, producing a comparative basis for selecting the best-performing algorithm.
- Evaluated model performance using accuracy, precision, recall, F1-score, confusion matrix, and ROC curve analysis, identifying the strongest model for deployment.
- Developed a web-based deepfake video detection system using the best-performing model, giving users a tool to verify the authenticity of video content.
- Assessed the system against eight ISO/IEC 25010 software quality characteristics (functionality, usability, reliability, maintainability, performance efficiency, compatibility, security, and portability), validating its overall software quality.

Retail Sales Performance Analysis *SQL and Tableau*

- Imported and analyzed a 10,194-record Sample Superstore dataset in MySQL to examine sales performance across products, categories, regions, subcategories, shipping, and discounts.
- Developed SQL queries to summarize sales trends and compare business performance across key dimensions, supporting data-driven findings.
- Built Tableau visualizations to present sales and profit trends and compare performance by category, region, and shipping method, making key business patterns easier to interpret.

Customer Churn Analysis *Python, Pandas, Tableau*

- Explored a 7,043-record customer dataset using Python to investigate churn patterns and relationships between customer characteristics and churn status.
- Converted the TotalCharges field to numeric format and investigated 11 blank or unparseable values associated with customers with zero tenure and no recorded churn.
- Used Tableau to visualize churn rates and compare customer segments, helping communicate patterns in customer retention and identify areas for further investigation.

HR Analytics — Employee Attrition Analysis *Python, Pandas, SQL, Tableau*

- Analyzed the IBM HR Analytics Employee Attrition dataset containing 1,470 employee records to examine attrition patterns across workforce characteristics.
- Used Python and SQL to compare attrition across factors such as overtime, tenure, job role, and income, and created visualizations and a Tableau dashboard to communicate findings.
- Identified higher attrition among employees working overtime and employees with shorter tenure, helping highlight workforce segments for further investigation.
- Used Tableau dashboards to visualize employee attrition across departments, job roles, overtime, and tenure, helping communicate workforce patterns for further review.

TECHNICAL SKILLS

- **Data Analytics:** Data cleaning and preparation, exploratory data analysis (EDA), data manipulation, statistical analysis, data visualization, data interpretation, data-driven decision-making
- **Language:** Python, SQL, MySQL, JavaScript
- **Tools and Visualization:** Tableau, Visual Studio Code, Google Sheets, Microsoft Excel, Jupyter Notebook, Git, and Github
- **AI & ML:** TensorFlow, OpenAI, Anthropic, pandas, NumPy, scikit-learn, Matplotlib
- **Project & Professional Skills:** Project planning, Agile/Scrum fundamentals, project documentation, teamwork, problem-solving, technical support, data storytelling, stakeholder communication
- **Frameworks and Libraries:** Flask, Django, React, Bootstrap

CERTIFICATES AND TRAININGS ATTENDED

Mastering the Art of Thesis and Capstone: Tips Tools & Techniques *2023*
Thesis Conceptualization *2024*
Seminar Workshop on Thesis Manuscript Writing *2024*
Data Analytics 101 *2025*
Google Data Analytics Professional Certificate – *Google · Coursera* *2026*
Google Advanced Data Analytics – *Google · Coursera* *2026*
Google Business Intelligence – *Google · Coursera* *2026*
Google Data Analysis with Python – *Google · Coursera* *2026*
Meta Full Stack Developer: Front-End & Back-End from Scratch – *Meta · Coursera* *2026*
Introduction to Software Engineering – *IBM · Coursera* *2026*
Google Project Management – *Google · Coursera* *2026*
AI Ready ASEAN — AI Learning Modules – *ASEAN Foundation · Google.org* *2026*
